	900 - 1000	0	0	0	0	1	2	0	0	0	0	0	1		

Note 1.- The losses shown in this table are those which would be occasioned by a battery of 6 guns in the case of the artillery, and by a battalion in line, or by 4 companies in extended order in the case of the infantry.

2. Troops under cover, or in extended order, incur only one-third of the loss given in the table. Cavalry incur a loss one-fifth greater than that given in the table. Infantry, in line, when exposed to the fire of shrapnel or common shell incur one-half of the loss given in the table.

3. All ranges are to be estimated before firing commences; if incorrectly estimated the fire is not considered as producing any effect in the current move. Artillery may correct its range in subsequent turns. The umpire may decide if the infantry do so or not (par. 12).

4. Enfilade fire of Artillery is always considered a twice as effective as direct fire (par. 46).

5. The loss sustained by cavalry in attacking infantry can either be estimated by the table, or a loss of 10 men per squadron may be allowed if the cavalry be victorious, or of 20 men per squadron if the cavalry be defeated without reference to the table.
